# OHLINDA X SUMMER TREND-COLORS 2022

Every year the Bretz fabric collection grows. When selecting new fabrics, we draw inspiration from renowned manufacturers. In the form of mood boards, we combine structures, colors and patterns. We develop a concept, which is then further developed with the manufacturers until finally our velour is created. The result of this collaboration: unique, individual, exclusive and specially adapted fabrics.

True to the motto „think big“, during the design process we think not only in terms of sofas, but in terms of complete living images. This holistic thinking means that the new fabrics not only look good on the new collection. Our Bretz classics also get a new look on a regular basis. This year, Ohlinda shines in the soft colors of the underwater world.

## TWO-TONE VELOURS

The four new bicolor velvets each consist of two colored yarns that harmonize with each other. During production, these yarns are woven together and give the two-tone velvets their distinctive shimmer and an almost magical aura. The colors underline with their iridescent colorfulness the image of the underwater world and remind of the colorful gardens of unexplored coral reefs.

The Two-Tone Velvets consist of 60% polyacrylic and 40% viscose fiber and are equipped with stain protection.

# PARADISE

## Jacquard - Velours

Our new fabric Paradise reflects the blue-green underwater world with plants and fish. It is the perfect complement to our tapestry Garden World:

A dazzling jacquard velour with a three-dimensional high-low effect. The flat backing fabric is made of sturdy polyester and viscose fibers. The silky velvety viscose pile on top forms a kind of ornamental leaf thicket. Initially, the jacquard fabric comes off the loom relatively colorless. Then, in the second step, the magnificent marine design is printed on, which is intensively accepted by the viscose, but not by polyester, making the fabric an abstract total work of art: a haptic and visual „Paradise“.

The pile of the Paradise jacquard velour is 100% viscose, the ground is 74% polyester and 26% cotton.

# PRODUCTION

## Jacquard - Velours Paradise

Here you can see three steps during the production of our jacquard velour Paradise. The fabric is woven from the yarn with the incorporation of velour fibers, and its ornamental viscose pile is then printed in blue, green, turquoise and yellow using the digital printing process. The result is an interwoven play of patterns and colors like those found in the underwater world.

underwater world

In its turquoise, blue and green tones, Ohlinda shows its tropical, deep side. It feels like sinking into an exotic lagoon and being carried gently by the waves of the sea: Ohlinda carries you on velvety cool hands and accompanies you from the known world, into the unknown depths of your imagination.

mediterran

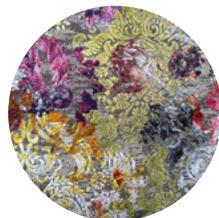

Ohlinda can also be natural. Combined with soft colors and natural materials, Ohlinda adapts to less opulent, more plain living spaces. The warm yellow and green tones are reminiscent of a picturesque sunrise on a quiet morning in Tuscany.

flower meadow

The orange, yellow and green tones reflect Ohlinda's exciting side. Such a color combination makes Ohlinda radiate a strong effect even in opulent rooms. Just as if she were the flower meadow on which you can switch off and relax in the impressive surroundings.
